

Vulnerability Risk Management

Stay ahead of cyber attacks by improving your cyber security and resilience capabilities

Today businesses are exposed to increasingly more sophisticated and frequent attacks that can compromise the success of an organization's business and reputation, as well as privacy and trust.

Customers demand solutions that can proactively defend and help their IT team to detect threats and classify and report on suspicious activities that threaten their business.

Our **Vulnerability Risk Management (VRM)** services provide a **global and complete view** of an organization's weaknesses, **helping** them to identify security threats and potential attack methods against its systems, **testing** its security **defenses** and **response** capabilities and allowing them to be corrected quickly.

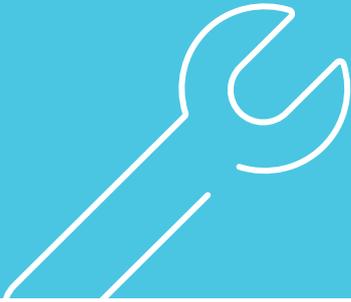

Key Benefits

- > **Control over your critical assets** - our persistent monitoring approach provides continuous visibility and analysis resulting in a higher rate of vulnerability identification and remediation.
- > **Reduced costs** - eliminates the need to invest in additional hardware or software and associated maintenance costs.
- > **Complete and continuously updated coverage** - Our scanning best-in-class technologies provide visibility over assets beyond a company's control and mitigate IT shadow risks.
- > **Optimal management driven by risk** - This helps justify the allocation of resources and ensures they are being used effectively to mitigate and prevent threats.
- > **Preparation for your security defenses** - drives an environment of corporate responsibility and determines whether your team is qualified to face real threats by testing its ability to constantly adapt to a continuously evolving environment.
- > **24/7 support** - a highly qualified and certified technical team with extensive experience verify each detected weakness to determine its severity and define the remediation plan, allowing organizations to focus resources on a quick resolution.
- > **Customer portal** - a single unified interface used to manage the life cycle of vulnerabilities, providing centralized management of reports, alerts and notifications on customers' vulnerabilities.

Service Features

- > **Clear vision** of vulnerabilities and the potential risks to which information systems are vulnerable.
- > A series of **corrective and preventive measures**, as well as additional **recommendations** for proactive security.
- > **Reduces time for detection and remediation** of high-risk vulnerabilities through early detection and support to prioritize the vulnerability.
- > Improves a company's **credibility and reputation** as a result of continuous monitoring of systems and infrastructure.
- > **Ensures compliance** requirements, internal policies and industry standards, avoiding issues of improper access to protected or regulated data.
- > **Third-party risk.** Be aware of the security status of the companies that work with you, avoiding attacks through assets that are beyond your control.
- > **SaaS Solution** (Security as a Service) enables scalable, secure and fast implementation.
- > Qualified and certified **technical team**, with more than 10 years' experience in security.

Vulnerability Risk Management

Customer Portal

An effective tool to manage the life cycle of vulnerabilities

- > Vulnerability Risk Management services are delivered in collaboration with ElevenPaths, Telefónica Tech's Cyber Security Team.
- > Our in-house proprietary technology and globally recognized ethical hacking experts deliver accurate and informative insight about any detected vulnerabilities affecting customers' infrastructure and/or systems.
