

## SECURITY EDGE

# Access business applications and browse safely

Wherever you are, the same security you enjoy in the office is always with you.

## MARKET CONTEXT

The **transformation** that the business world is undergoing in terms of its **journey to the progressive digitization** of all its processes, necessarily implies the structural need to have a secure and reliable connection to the Internet.

Organizations must be prepared to face an increasingly hostile **cybersecurity environment** in which crimes and frauds are increasing both in number and complexity, so that the assumption of old or legacy methods are not the solution.

So, it's time for an **end-to-end solution** that grows and learns as you need it to.

## OUR PRODUCT

**Security Edge** is a flexible and configurable managed service that ensures client peace of mind by providing secure and **effective web browsing** for all employees, regardless of the Internet access point or device used. It is also a secure web browsing solution for large enterprises / MNCs that require advanced functionality and expert management.

Security Edge is **delivered from the cloud** and focuses on an environment where the company's assets are both on the corporate network and in the cloud (**SaaS, PaaS, IaaS**) and can be accessed from anywhere and from any device.

The comprehensive solution that brings security to your business  
Welcome to increase your operational efficiencies, expert support team and superior technologies

- Security Edge is a service with a modular offering that the company configures to adapt at any time to the needs arising from an ongoing process of digital transformation. Its many uses include

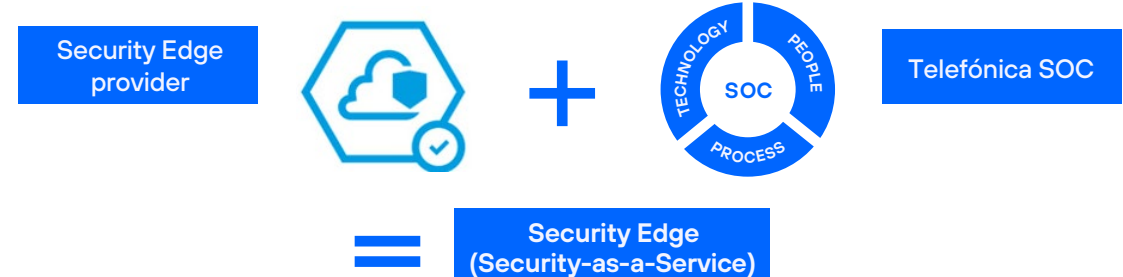

- Blocking access to malicious sites, malware downloads or botnets while users are browsing from any location and on any device.
- Enforce web category-based browsing policies.
- Protect against unknown or zero-day malware.
- Maintain control and visibility of SaaS application usage.

- Provide secure access to private applications through a Zero Trust model for users from any location and device. Security management is delegated to a team of highly skilled SOC experts. It also relieves your organisation of the need to invest in, deploy and maintain its own security infrastructure by adopting an OPEX model.

- Customizable bundles adapted to our customer needs
  - Professional
  - Business
  - Transformation

- Security as a Service Solution
- Advanced solution aimed to address the latest security challenges for MNCs and large corporations

### Solution components

This solution **combines and consolidates** key network security features into a single **cloud security** platform and offers different **technical alternatives**
