

VIRTUAL DATA CENTER

Your infrastructure in the Cloud

The best of physical Data Center but easier,
cheaper and safer

MARKET CONTEXT

If the events of recent years have taught us something, it is that it is essential to have the ability to adapt to the new times in which more and more processes and workflows are in different places and require a virtual environment to continue operating, **achieving greater profitability of our own business.**

This leap to virtualization has been a challenge in terms of investment, lack of specialized personnel and speed of adaptation, as well as the security risks associated with IT infrastructures in the cloud.

Converting any physical environment to virtual is now much easier, cheaper, more flexible and lets companies to adapt to market and business changes with the ease that the virtual environment allows.

OUR PRODUCT

Our Virtual Data Center provides a pay-per-use, secure, flexible, environment, highly compatible with private environments **without the need for large CAPEX investments.**

The security of our service is backed by Telefónica's experience as one of the main VMWare providers in the world and our expertise in data protection and high availability systems, especially in Europe and Latin America.

Computing, storage, or network resources, with infinite possibilities, through a simple management portal that would allow to maintain the needs of your business and the day to day of your IT resources.

Multicloud services for your virtual expansion

Migrate to the infrastructure that supports
your business to the private cloud

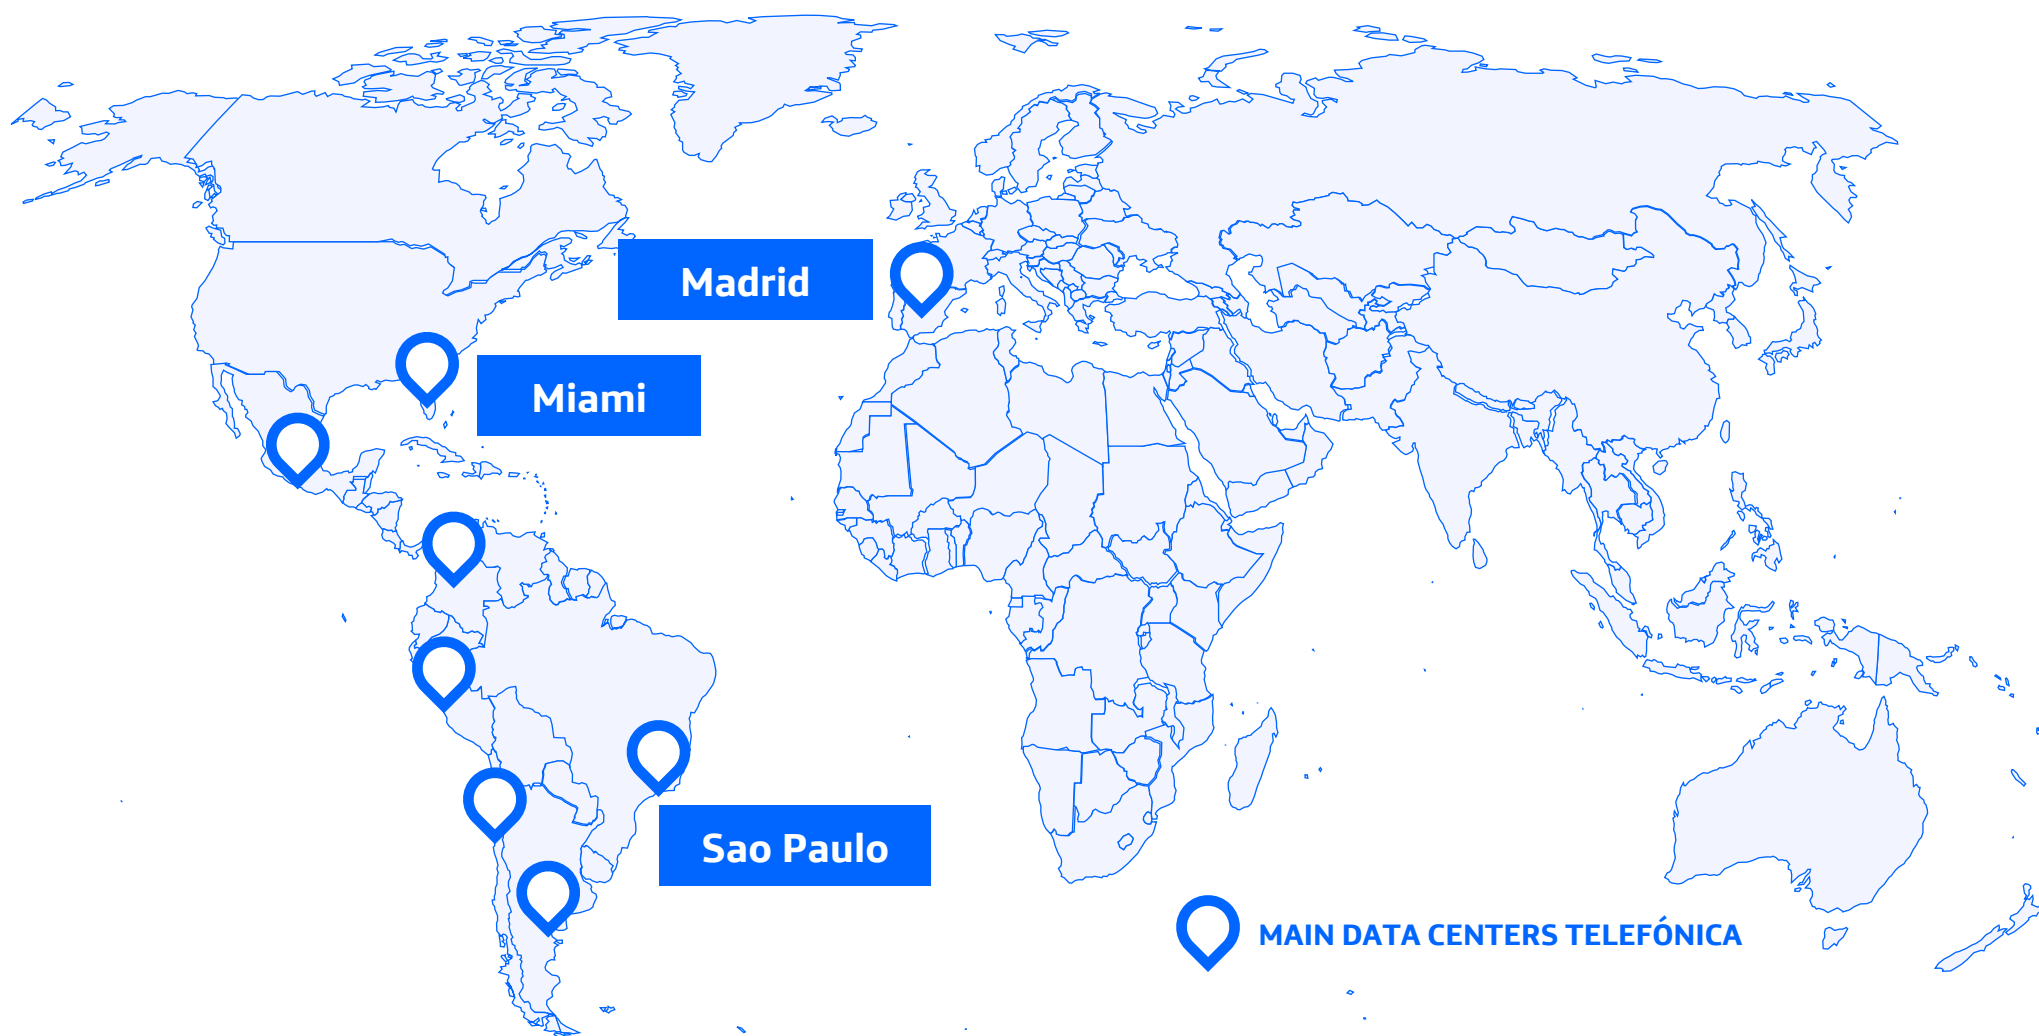

- **Global single point of contact:** to our telco services and for technical end-to-end support
- **Control of costs** during the entire life cycle of your service
- **Managed and professional** services
- **Virtual Data Center:** we adapt to your needs
- **Connectivity:** International, WAN to Cloud and Internet Access
- **Best equipment** in the market

How does our Virtual Data Center help you?

- VDC is designed from security. We offer an integral proposal for the protection of your data and applications with backup services.
- Its high availability in Latin America makes Telefónica the ideal provider to avoid regulatory problems.
- VDC provides an environment that is secure, flexible and has the possibility of hiring pay-per-use models.
- Our infrastructure, based on VMWare virtualization, is highly compatible with private environments, but without the need to commit to CAPEX.
- VDC has built several additional capacities to the standard virtualization suite (computing, storage and networking resources) offering auto and plan scaling possibilities, cluster creation, NAS storage and all managed from a single portal that is user-friendly and that helps to align the necessities of your business to the day-to-day IT resources.
- VDC It is designed for the high availability of your applications, with redundant environments and the possibility to hire a Disaster Recovery Plan with very demanding recovery times (RTO and RPO less than an hour).
