

GLOBAL LAN-WLAN SERVICES

# The connection that follows your movement

The fast reliable connection you need in your premises, anywhere your offices are

## MARKET CONTEXT

To have a strong Wi-Fi connection in HQs is still of great importance to any business, especially when the comeback from the pandemic is steadier and safer every day. To cover the increasing need of faster connection wherever in the premises, is the objective of our LAN-WLAN end-to-end service.

We improve our technologies to adapt your business to the ever-growing speed of business so you can feel the boost in your mobility and productivity immediately.

## OUR PRODUCT

Our LAN-WLAN service provides seamless communication for your business while monitoring wired and wireless infrastructure within your private local network.

Our LAN-WLAN is an E2E solution with our Zero-Touch provision process that will allow you to implement it automatically so you can focus on what is important: your business.

# Stay connected anywhere in your premises

Flexible and scalable to adapt to your business with zero-touch deployment for increased efficiency

TGS offers you the LAN-WLAN service for all on-premises, cloud-based, wired and wireless business needs. We provide the end-to-end value chain for all the switches, controllers, and wireless access points of your local network:

- Equipment Supply
- Installation and Configuration
- Maintenance
- Management and monitoring
- Site survey included
- SLAs that maximize satisfaction and user experience
- Reports available through Customer Control Center

End-to-end management solutions for your LAN/WLAN infrastructure and devices

# How does LAN/WLAN help?

Fast high-availability connection at the client offices:

We can enable your enterprise's digital transformation with exceptional flexibility and scalability.

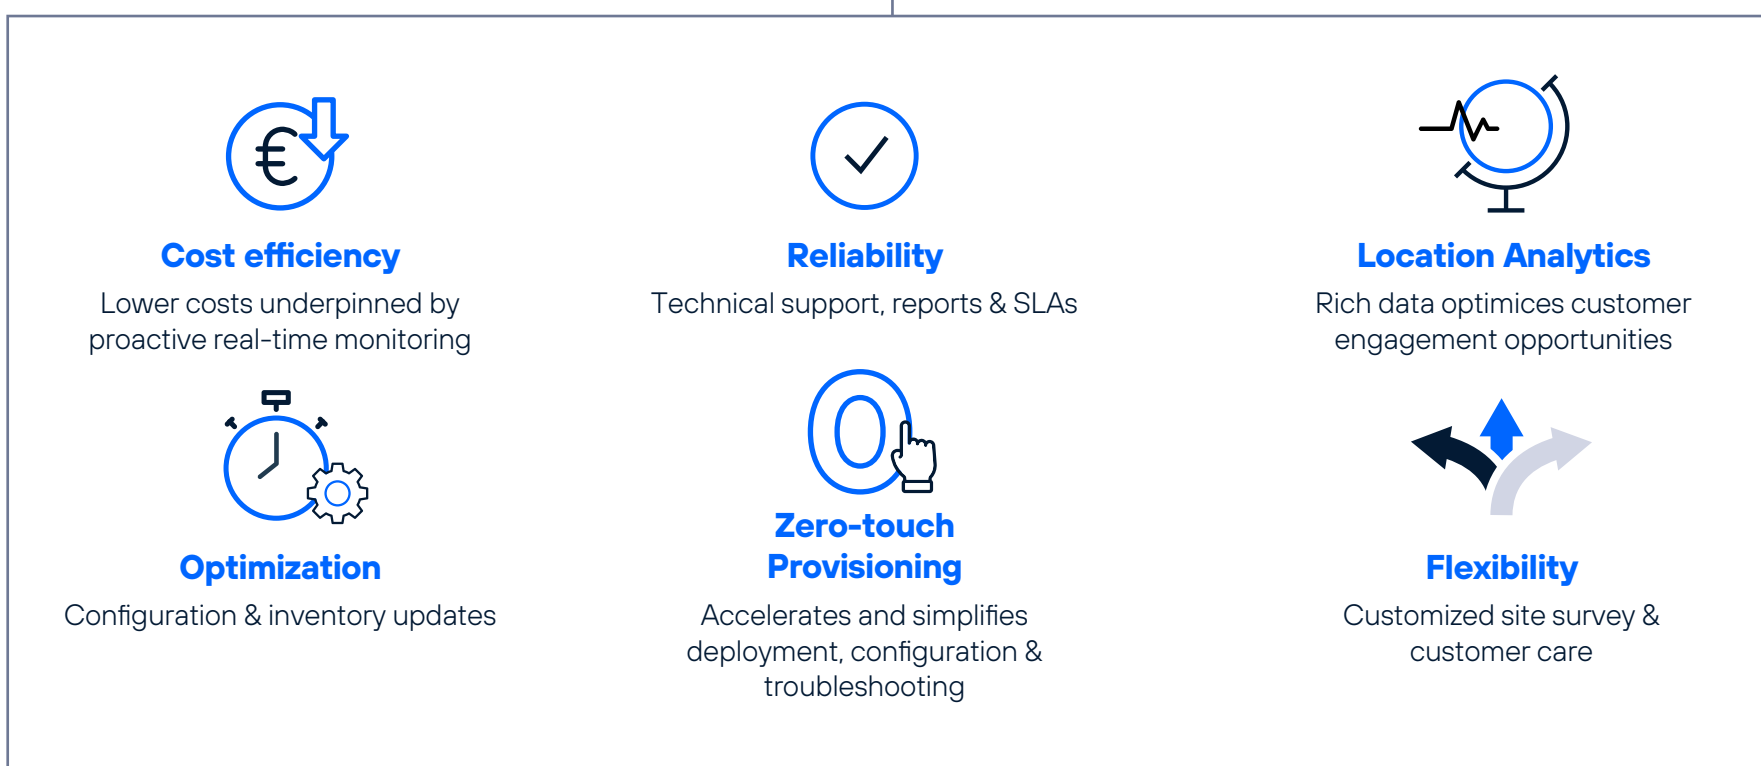

## Local Area Network (LAN)

Works perfectly when you need to connect fixed devices in a specific location, ensuring fast, reliable and secure connectivity, with high service quality.

## Wireless LAN (WLAN)

As an integrated part of the conventional wired network design, gives users the ability to move around within a local coverage area, allows you to stay connected, regardless of the location, improving your effectiveness and efficiency.

# Service Architecture

A typical Enterprise has multiple sites and we can help you connect them so they can communicate to each other. This service can be on premise and cloud-based. The WLAN links various devices using a wireless distribution method within a limited area.
