- Ability to adapt to customer-specific design needs.
- Modular space, power growth and capacity reservation agreements.
- Immediate capacity availability in existing rooms. Space: 19K sqft, Power: 2.2 MW.
- Up to 30K sqft and 3 MW available for short/medium term construction of new server rooms.
- Support for a wide range of power densities, resiliency levels and cooling methods (air or water-based).
- We offer our global datacenter construction and operation expertise as well as our vendor relationship and buying power.

Independent External Certifications:

Internal Evaluations Audits:

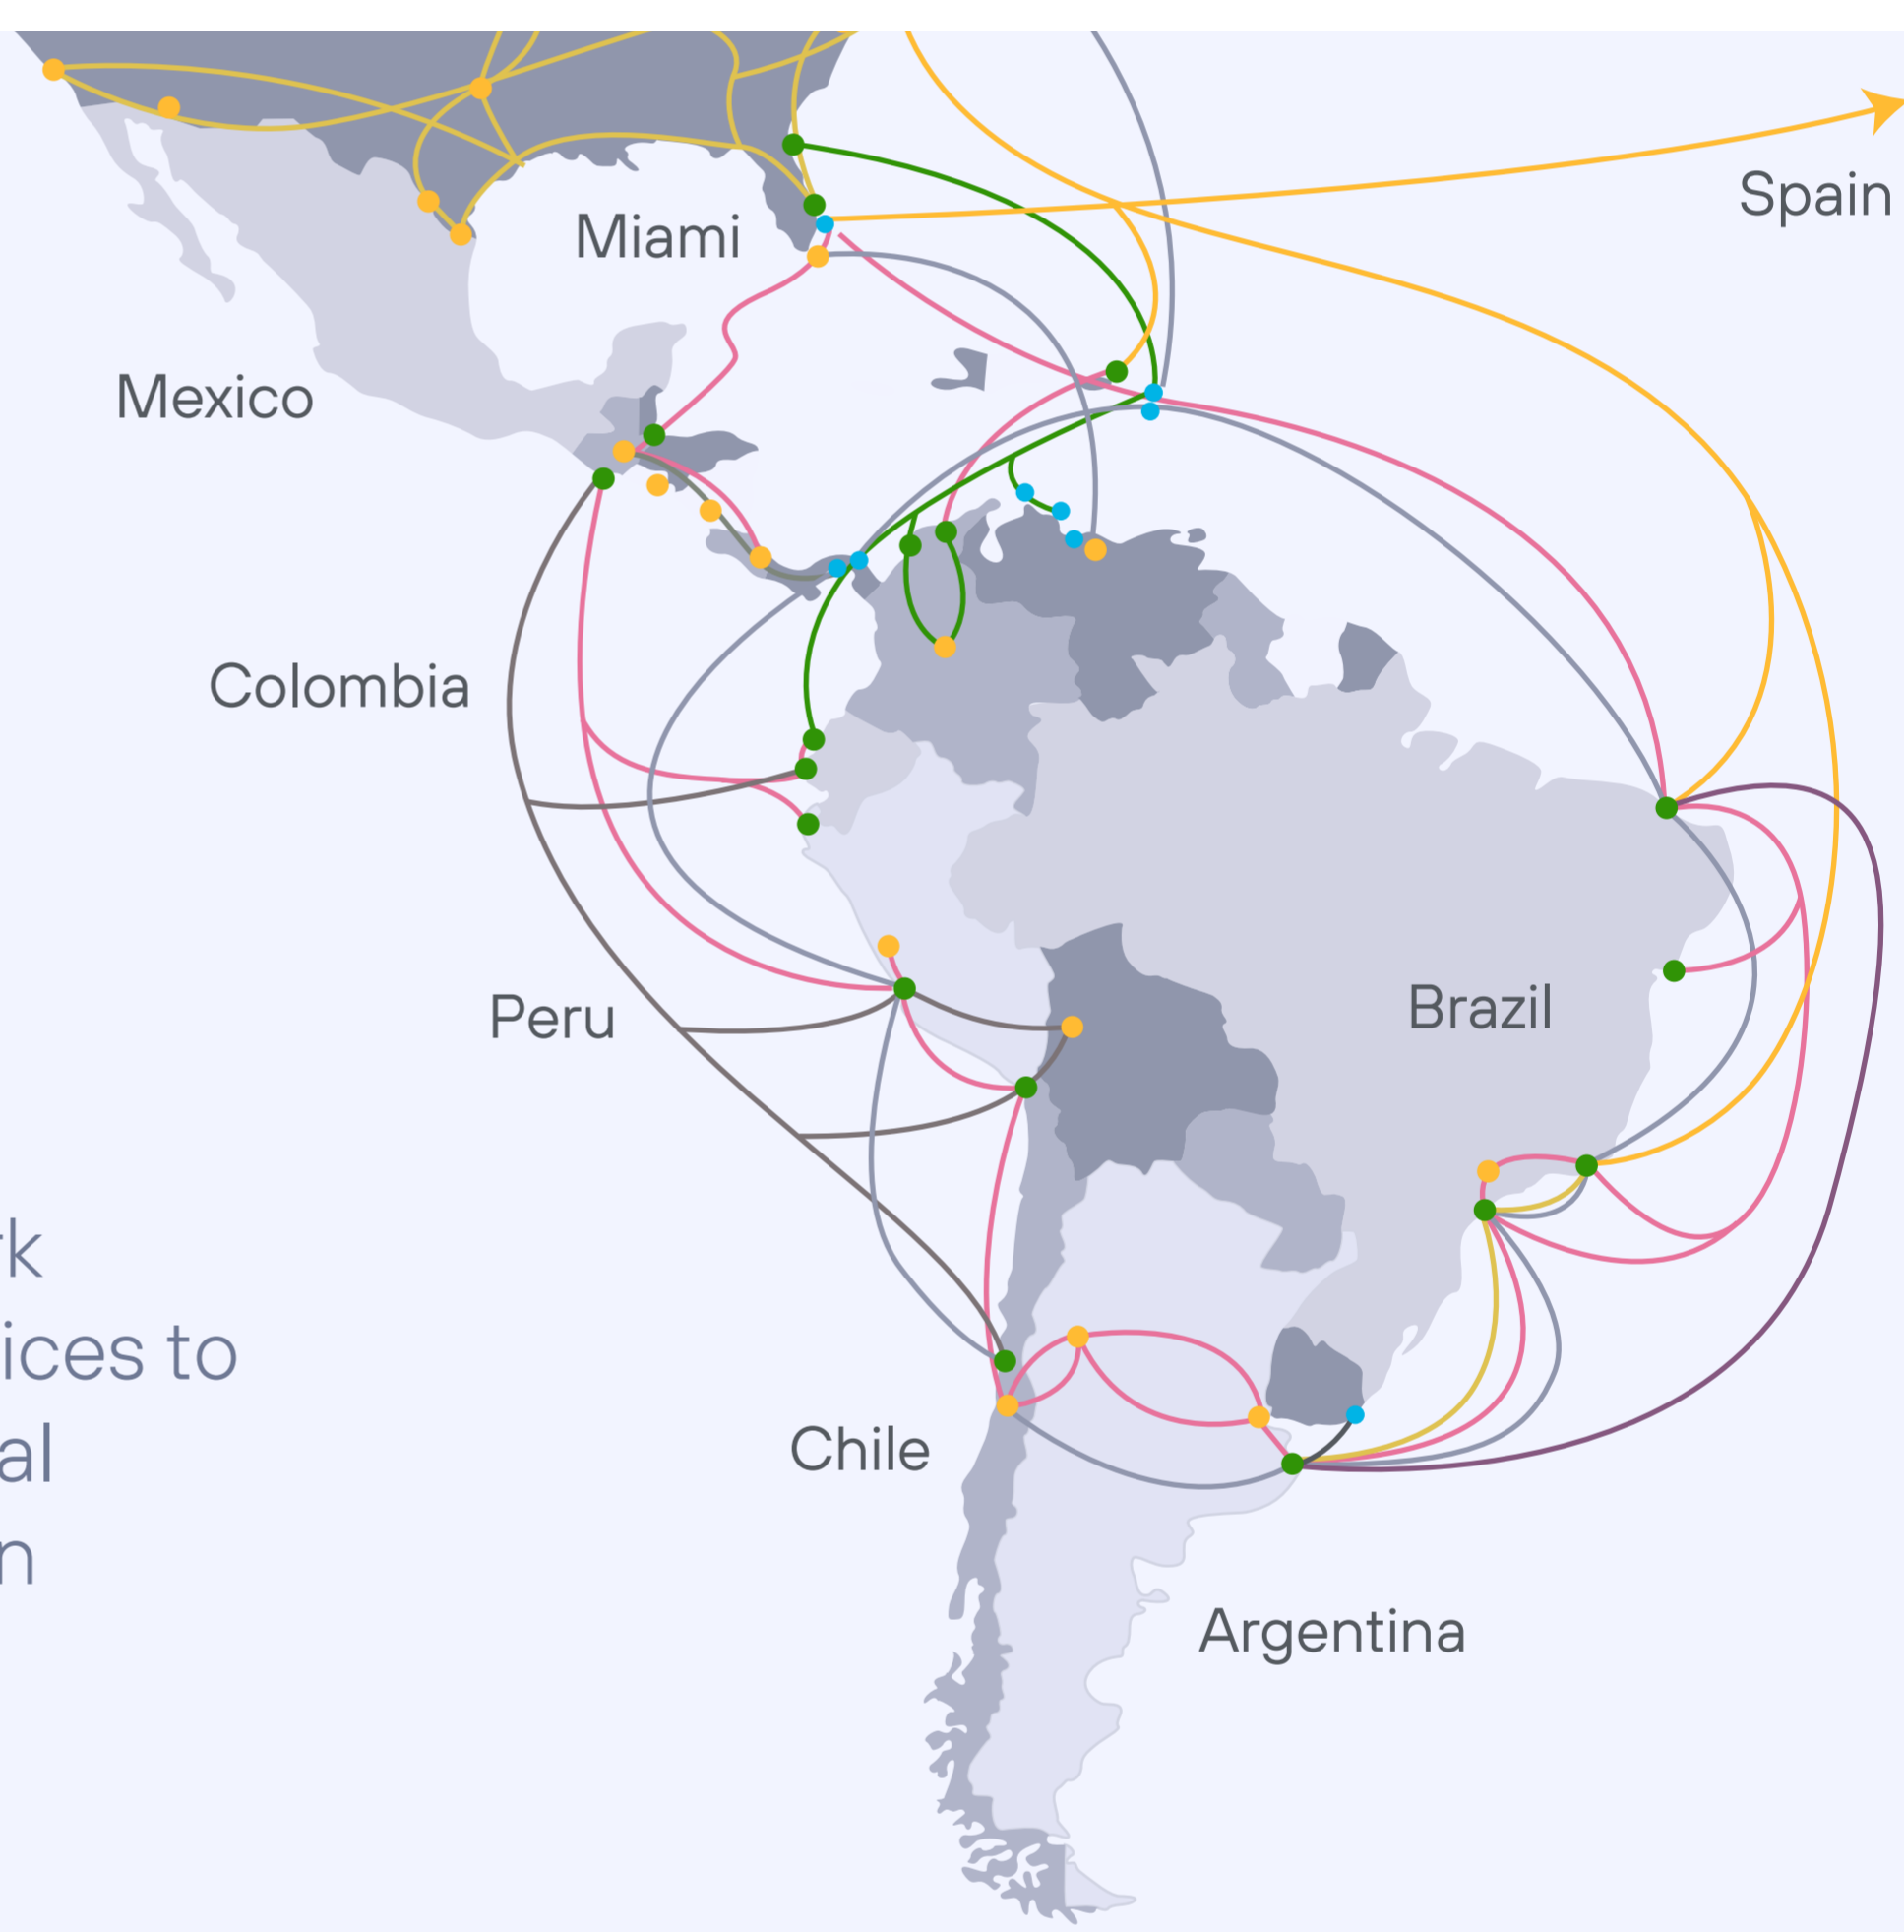

TGS Global Compliance & Certification:

Regional datacenter platform in USA and largest presence in LATAM

We provide datacenter, network infrastructure and support services to help providers expand their local presence across Latin American markets through Telefónica

- Interconnected datacenters: global connectivity through Telefónica's global IP backbone and fiber optic network.
- NEW local connectivity to domestic ISPs and Service Network providers.
- Cloud on-ramp connectivity with top public clouds – Hybrid/Multicloud + Managed Services offering.
- Market Knowledge: Telefónica operates in Latin American countries as a Tier I or Tier II mobile and fixed operator since the 90's, and in the US since 2000.
- Our offering includes power, cabinets, cages, rooms, build-to-suit spaces, IaaS and value added services.
